

THE PLACE OF ADVERBS IN PHRASEOLOGY

Saidrahimova D.S

*PhD in Philology, Associate Professor of the
Kyrgyz-Uzbek University Osh, Kyrgyzstan –
saidrahimova71@mail.ru*

Annotatsiya: Turkiy tillarda frazeologik birliklarning ellipsistik hodisa jarayoni ham mavjud. Frazeologik birliklarning ellips almashinuvining ko‘rinishlaridan biri bu tizimdagi ma’lum bir komponentning yo‘qolishidan kelib chiqqan holda, turli xil frazeologik birliklardir. Nutqdagi morfologik kategoriyalar. Qo‘shimchalar nutqi biz yuqorida muhokama qilgan ot, fe’l, fe’l shakllari va boshqalarning kategoriyalariga qaraganda ko‘proq polemikdir.

Kalit so‘zlar: *ellipsistik, transformatsiya, komponent, frazeologik, idiomatik, qo‘shimcha, semantik-funksional, qo‘shimcha, affikslar, til, sinonim.*

Annotatsion: In Turkic languages there is also a process of ellipsistic phenomenon of phraseological units. One of the manifestations of the transformation of the ellipsis of phraseological units is that, based on the loss of a certain component in the system, phraseological units are formed that belong to a different functional group. Morphological categories in discourse. The discourse of adverbs is more polemical than the categories of nouns, verbs, verb forms, etc., which we discussed above.

Keywords: *ellipsistic, transformation, component, phraseological, idiomatic, adverb, semantic-functional, adverbial, affixes, language, synonymous.*

In the Kyrgyz and Uzbek languages there are many phraseological and idiomatic units that correspond to the semantic-functional nature of the adverb. In adverbial phraseological units of the Kyrgyz and Uzbek languages you can widely find affixes that, like idioms, merge (grow together) with the root. Phraseologisms used in an adverbial meaning are often found in colloquial and artistic speech, for example, in the Uzbek language an adverb refers to a part of speech *ипидан игнасигача икки дунёда ҳам, миридан-сиригача, ҳа-ҳу дегунча и etc.. (от нитки до иголки в обоих мирах, со дна на дно, пока говорили то да сё)*. In Kyrgyz language: *жибинен-ийнесине чейин, көз ачыл-жумганча, ташка тамга баскандай, камырдан кыл сууругандай, айта-буйта дегиче etc. (от нитки до иголки, в мгновение ока, как надпись на камне, как волос из теста вытащил – equivalent: without a hitch, пока говорили то да сё – equivalent: in the blink of an eye).*

It is known that the phenomenon of synonymy exists both in phraseological units, and more precisely in adverbial phraseological units. The seme of expression of units in the synonymous paradigm of phraseological units varies depending on the degree, for example *ийнесинен – жибине чейин – ипидан игнасигача etc.* In the Uzbek language in phraseological units *ипидан игнасигача, умр баҳори, миридан-сиригача, қилидан қуйруғигача, бир ёқадан бош чиқариб, бир енгдан қўл чиқариб, енг шимариб, бош кўтармай, кечани-кеча, кундузни кундуз демай*

and so on. The seme of the name “with holistic analysis” will be common.

In Turkic languages there is also a process of ellipsistic phenomenon of phraseological units. One of the manifestations of the transformation of the ellipsis of phraseological units is that, based on the loss of a certain component in the system, phraseological units are formed that belong to a different functional group. Ellipsistic transformation of phraseological units is realized in various forms. Here are the components of the adverbs: *юзини тескари ўғирмоқ – юзини ўғирмоқ, юзини терс бурмоқ – юзини бурмоқ* fall and transform.

Adverbial phraseological units are the main means of enhancing the aesthetic function of language.

Syntactic functions of adverbial lexemes in Turkic languages. Adverbial lexemes, regardless of what words they are associated with, are always adjacent to them. This is only natural for an adverb. When adjoining, the dependent word remains unchanged, but syntactically it is related to the subordinate word in order of place, intonation and semantic meaning. “Adverbs often adjoin freely. Since adverbs are mainly subordinate to words expressing actions (verb). Therefore, if there is only one verb in a sentence, then no matter in what order the adverbs are arranged, as dependent words, their connection with the action is preserved. In the case where there are two or more verbs in a sentence, then adverbs can only change their position in and around subordinate words (like subordinate clauses): *Эккурсияга кийин баруучулар бүгүн мектепке келбейт. Идущие позже на экскурсию, в школу сегодня не приходят.* In this example, after the adverb *kiin* there is an inversion only to the word *excursionaga*, and the adverb *bugun* only to the words *mektepkе* or *kelbeit* (to change the state of the place)” [Zhamankulova, 2014: 211].

And in the Uzbek language, the difference from the phonetic side, even in writing, “bitishuv” plays the same task with adjacency. In the Uzbek language, the word “uzbekcha” is combined with both a verb and a noun, therefore it is a circumstance and a definition: *ўзбекча нутқ* Uzbek speech (definition). And in the Kyrgyz language the same process is observed: *өзбекче сүйлөө* speak Uzbek (circumstance); *өзбекче кеп* Uzbek speech (definition). In both languages, when connected with a verb, a predicate, adverbs are predicates: adverb of time: *Илгери, илгери бир куш жыгачтын башына уя салып эки балапан чыгарат* (“Күкүк менен Зейнеп”). *A long time ago, a bird built a nest on the top of a tree and hatched two chicks* (“Cuckoo and Zeunep”); *Gozir adashish ham sizga foydali* (U. Usmonov); *Now delusion is beneficial for you* (U. Usmonov); *circumstances of the place:*

He болсо да жашсыз адам болобу...

Мен өзүмдү байкап көрүп оболу.

Болжон туруп коюн алгам датасын

Же төмөндүр, же кеткендир жогору. (Б.Сарногоев, “Элүү жаш”)

Be that as it may, is there such a thing as an ageless person...

First I observed myself.

The date I set at random

Either lower, or possibly high. (B. Sarnogoev, “50 years”)

Adverbs are also combined with other parts of a sentence, except for the circumstances expressed by the verb. And in such cases it is a circumstance. Combined with a circumstance given in the form of a verb: *Адатынча кулүмсүрөп ичкериден чыкты – Одатдагидай ичкаридан илжайиб чиқди.* As usual, he left the room smiling.

A circumstance is a relative integrity, consisting in meaning of morphological as well as syntactic opposition and unity. The syntactic meaning of an action attribute, which is considered an invariant meaning, is known through the following morphological meanings (variant meanings).

Such a system of morphological meanings is an invariant meaning formed through the syntactic form of the adverbial adverbial form – different variants of the meaning of the action attribute.
