Abstract: This thesis explores the transformative impact of digital technologies on literary creation and education. It investigates how digital tools shape modern literature and analyzes the prospects and challenges of employing pedagogical technologies in independent learning. By combining a theoretical review with a mixed-methods research approach, the study reveals the dual-edged nature of digital advancements. It emphasizes the role of educators and institutions in leveraging these tools while mitigating their shortcomings to enhance independent learning and creative expression.

Keywords: digital technologies, literary creation, pedagogical technologies, independent education, education technology, creative writing.

Аннотация: В этой диссертации исследуется преобразующее влияние цифровых технологий на литературное творчество и образование. Он исследует, как цифровые инструменты формируют современную литературу, а также анализирует перспективы и проблемы использования педагогических технологий в самостоятельном обучении. Сочетая теоретический обзор с исследовательским подходом, основанным на смешанных методах, исследование раскрывает двойственную природу цифровых достижений. В нем подчеркивается роль преподавателей и учреждений в использовании этих инструментов, одновременно смягчая их недостатки для улучшения независимого обучения и творческого самовыражения.

Ключевые слова: цифровые технологии, литературное творчество, педагогические технологии, самостоятельное образование, технология образования, творческое письмо.

Annotatsiya: Ushbu tezis raqamli texnologiyalarning adabiy ijod va ta'limga transformativ ta'sirini o'rganadi. Raqamli vositalar zamonaviy adabiyotlarni qanday shakllantirishini o'rganadi va mustaqil ta'limda pedagogik texnologiyalardan foydalanish istiqbollari va muammolarini tahlil qiladi. Nazariy sharhni aralash usullar tadqiqot yondashuvi bilan birlashtirib, tadqiqot raqamli yutuqlarning ikki tomonlama tabiatini ochib beradi. Bu o'qituvchilar va muassasalarning mustaqil bilim olish va ijodiy fikr yuritish qobiliyatini oshirish

uchun kamchiliklarini yumshatish bilan birga ushbu vositalardan foydalanishdagi rolini ta'kidlaydi.

Kalit so'zlar: raqamli texnologiyalar, adabiy ijod, pedagogik texnologiyalar, mustaqil ta'lim, ta'lim texnologiyasi, ijodiy yozish.

Introduction: Technological advancements have profoundly impacted creative and educational environments in the twenty-first century. Today's writers are transforming traditional narrative and literary creation by utilizing AI-powered technologies, digital publication platforms, and collaborative tools. At the same time, learning management systems (LMS), massively open online courses (MOOCs), and gamification platforms are driving a change in the education industry from traditional classroom models to adaptable, technology-driven autonomous learning systems. Even with these developments, problems like uneven access, reliance on technology, and moral dilemmas still exist. This thesis examines the ways in which digital technologies impact various domains, pinpoints their possibilities, and tackles their constraints.

Literature review: A revolutionary development in creative writing has been the emergence of digital instruments. While AI-powered applications like Grammarly offer automatic editing, writing software like Scrivener helps organize intricate stories. Critics contend that by enforcing algorithmic rules, these technologies may homogenize creative types even as they increase efficiency. Digital publishing platforms have also made access more accessible, allowing self-publishing writers to get beyond conventional gatekeepers. However, issues with discoverability and quality are brought up by the digital market's oversaturation.

Technology has brought about a new era of self-directed learning in the field of education. Self-paced learning possibilities that meet a variety of requirements are provided via e-learning sites like Coursera and Khan Academy. Although it has been demonstrated that gamification technologies like Kahoot! and Duolingo increase participation, they run the danger of oversimplifying the material and ignoring more complex critical thinking. Additionally, AI is used by adaptive learning systems to tailor content according on student performance; however, these systems sometimes need extensive data collecting, which raises privacy and ethical concerns.

In all domains, obstacles to fair access continue to be a major problem. Students in underprivileged communities, where internet access and digital skills may be scarce, are disproportionately impacted by the digital divide. Because of technological limitations, writers in these areas also find it difficult to take advantage of digital tools.

Methods: In order to obtain a thorough grasp of the subject, this study uses a mixed-methods approach. Semi-structured interviews with educators and professional writers to learn about their experiences with digital technologies are one type of qualitative research. Surveys aimed at teachers and students were used to get quantitative data on their opinions about the usefulness of digital

technology. To put findings in context, case studies of freelance writers and educational institutions utilizing cutting-edge digital technologies were also examined.

Diverse participant demographics were ensured by using internet platforms to collect data over a six-month period. While survey data were statistically assessed using programs like SPSS to find patterns and correlations, interview transcripts were transcribed and subjected to thematic analysis.

Results: The results show that both autonomous learning and literary production are significantly impacted by digital instruments. Many writers adopted platforms for collaborative writing, and they reported being more efficient while drafting, revising, and sharing their work. However, 65% of respondents were worried that an excessive dependence on AI-driven recommendations would result in a loss of personal style.

Students emphasized how gamified platforms and e-learning technologies provide flexibility and involvement in the classroom. However, 40% of teachers believed that they lacked the necessary training to properly incorporate these technologies into their lessons. Case studies showed that whereas digital platforms increase accessibility and encourage self-directed learning, they frequently fall short of traditional teaching approaches in terms of emotional investment and individualized instruction.

Discussion: Digital technologies have both positive and negative effects on schooling and literary production. On the one hand, they improve efficiency, democratize resource access, and create new opportunities for learning and innovation. Students have access to a multitude of information, and authors may try their hand at multimedia storytelling. However, it is impossible to ignore issues such as an excessive dependence on automation, quality control, and unequal access.

The incorporation of AI and other digital technologies should be handled carefully by authors. Instead, than taking the place of human creativity, these technologies need to enhance it. In a similar vein, educators must strike a balance between the benefits of technology and the requirement that students develop their critical thinking and social skills. By investing in infrastructure, educating educators, and guaranteeing fair access to resources, institutions play a critical role in tackling these issues.

Conclusion: The study comes to the conclusion that although digital technologies have transformed literary production and education, their integration need careful thinking in order to minimize drawbacks and optimize advantages. Digital technologies present authors with previously unheard-of chances for creativity, but they also need moral standards to maintain authenticity. The move toward self-directed learning calls for a reassessment of access tactics and instructional methodologies for both educators and students. Future studies should concentrate on closing the digital gap and creating frameworks that strike a balance between human-centered ideals and technology advancement.
