THE EFFECT OF THE USE OF ERTACTHERAPY IN PRESCHOOL EDUCATIONAL ORGANIZATIONS

Eshonkulova Nazokat

Student of Andijan State Pedagogical Institute
Uzbekistan

nazokateshonkulova05@gmail.com

Abstract: This article will talk about the history of ertactherapy, origin, opinions of scientists, how ertactherapy plays a role in a child's life, how to correctly shape the child's behavior, how to relieve fear in a child, increase respect and affection for each other.

Keywords: ertactherapy, morality, fairy tale, younger generation, means of upbringing, psychology, human upbringing.

Аннотация: В этой статье пойдет речь об истории эртактерипии, происхождении, мнениях ученых, о том, какую роль эртактерипия играет в жизни ребенка, как правильно формировать поведение ребенка, как снять страх у ребенка, повысить уважение и привязанность друг к другу.

Ключевые слова: эртактерипия, мораль, сказка, подрастающее поколение, средства воспитания, психология, воспитание человека.

Annotatsiya: Ushbu maqolada ertakteripiyanning tarixi, kelib chiqishi, olimlarning fikrlari, ertakteriyanning bola hayotida qanday rol o'ynashi, bolaning xatti-harakatini qanday to'g'ri shakllantirish, bolada qo'rquvni qanday yo'qotish, har biriga hurmat va mehrni oshirish haqida so'z boradi. boshqa.

Kalit so‘zlar: ertakoterapiya, axloq, ertak, yosh avlod, tarbiya vositalari, psixologiya, inson tarbiyasi.

Language: English

Fairy tale therapy is a method of psychology that uses fairy tales to correct education, behavior, prevent psychological deviations, help psychologically and psychotherapeutic, and solve problems in other areas.

Fairy tales are works of art and literature, and at the same time are a source of information for the people in many theoretical and practical fields. They are considered the wealth of folk pedagogy. In addition, we can include fairy tales among pedagogical works so that they have pedagogical ideas. As you know, the Russian classical pedagogue Ushinsky was a harmonious personality of ideal, perfect mental and moral-aesthetic development in the pedagogical sphere. According to the firm conviction of the Great Russian educator, this task can be successfully solved if the material of folk tales is used in education in a wide range. Thanks to fairy tales, a beautiful poetic image develops in the heart of a child with a logical mind together, and we can witness the development of word-logic thinking, fantasy, emotional sphere. Ushinsky studied at a wider level the issue of the pedagogical content of fairy tales and their psychological impact on the child. He saw

folk tales as preferable to stories published in educational literature intended for children, as the stories had been condemned by the great educator: as if an old man had turned his face into the face of a young child, as a fake.

Fairy tales are an important educational tool developed and tested by the people for centuries. In life, in the practice of human education, the magnitude of the pedagogical significance of the fairy tale was proven on the basis of evidence. Children and fairy tales are inseparable from each other, they are created for each other, so it is imperative that each nation's acquaintance with the fairy tales of its people is included in the educational and educational process of the child. In Uzbek pedagogy, there are thoughts about fairy tales not only about educational material, but also about the pedagogical tool, methodality. Realizing the meaning of a fairy tale as a pedagogical tool, it should be recognized that even if we repeat the same moral qualities to children at least a thousand times, it is still incomprehensible to them that the meaning does not become understood; but if you tell them a fairy tale embedded in the same thought, the child will be excited and amazed at this. The educational role of

fairy tales in educators is considered great. There is an opinion that the pedagogical significance of fairy tales affects the emotional and aesthetic side of a person, and not the mental side. This view is not entirely acceptable. It is fundamentally wrong to contrast mental activity with emotions: the emotional sphere and mental activity are inseparable, without emotions, it is impossible to know the truth. Fairy tales are often thought of by their subject and content, encouraging thought. Often the child comes to the conclusion that "this does not happen in life" as a result of hearing fairy tales. Involuntarily the question arises: "What happens in life?" The conversation of the narrator with the child, which includes the answer to this question, is carried out in a conscious state. But fairy tales contain directly conscious information. It should be noted that the conscious content of fairy tales concerns individual details of folk customs and traditions, in particular, even the daily household sphere.

Of course, the educational content of fairy tales also depends on the narrator. Skilled storytellers usually shape thinking in a child with the help of questions, always trying to make the most of the opportunity. For example, after a fairy tale was told and broadcast: "What do you guys think, what kind of animal was in our fairy tale? Can you remember the names of the monsters?" and through similar questions it will be possible to develop contemplation in children. Children learn to understand the correct understanding of the content of events, deeds and actions earlier, that truths

are hidden under any funny events in life. Each fairy tale has the moral qualities necessary for a child, because he must determine his place in life, learn the norms of moral and moral behavior in society. Philosophers study a fairy tale and reveal its meaning as forms of the spiritual experience of mankind. Philologists, first of all, folklorists, think that "a fairy tale is a dress of the unforgettable spirit of the people."

The subject of the tale has been an object of continuous debate and debate throughout the history of the development of psychology as an independent field of science. It has long been recognized by psychologists that fairy tales are simple at first glance, but that there is an educational, developmental, psychodiagnostic, psychocorrective, psychotherapeutic feature hidden behind wonderful stories. However, even today it cannot be said that it is in high demand, which is explained by its essence, scale and uncertainty of the solution of the question in its theoretical plans.

The educational significance of fairy tales is very great. There is an opinion that the pedagogical and psychological significance of fairy tales belongs not to cognitive processes, but to emotional and aesthetic aspects. This point cannot be said to be true. The idea that cognitive activity is opposite to emotions is completely wrong: the emotional sphere and cognitive activity are inseparable, without emotions, it is impossible to know the truth, as we know it.

In conclusion, when we say that fairy tales can cause a child's spiritual and moral growth, the development of creativity and imagination, an increase in their understanding of the world, an expansion of the level of thinking, an increase in self-confidence, and, among other things, the destruction of inappropriate fears that lie inside. An important role is played in increasing the child's speech as well as the ability to think logically. Fairy tales teach

the child to understand their feelings and express empathy for the feelings of others. Thus, fairy tales serve as an important tool in shaping the whole worldview of a child, preparing him for life in the future. In general, fairy tales serve as an important pedagogical tool not only to help children understand the world, but also to prepare them for real life.
